

MILLENNIUM WITH DMP INTRUSION ALARM SYSTEM INTEGRATION

A complete access control system with intrusion detection for an enhanced security solution

Designed to meet the challenges of today's demanding environments, the Millennium Group and Digital Monitoring Products (DMP) integration provides the flexibility, scalability and control required for comprehensive security management. DMP's intrusion detection system, Model DMP XR 500 and Millennium products equip organizations with the right tools to protect people, secure assets and ensure regulatory compliance. Combining access control, digital video, intrusion and other functions into one powerful system.

Integration works when readers connected to the Millennium Ultra software have functionality of an intrusion zone as well as a card reader and keypad. The readers can be in an alarm state for a set time after its area has been armed and for a set time before its area is disarmed with the alarm reported. All reader messages regarding the DMP panel are user defined in the Millennium Ultra software.
