

# MILLENNIUM ULTRA SAFETY NOTIFICATION WITH RAVE MOBILE

Fast, reliable and critical mass notification system

The Millennium Ultra Access Control platform integrates with the Rave alert mobile safety system. The mass notification system gets the right message to the right user at the right time from any internet connected device. The alert system integration with Millennium Ultra provides a gateway for events alarms within the Millennium access control system to be sent into the connected Rave account for onward dissemination to the pre-programmed recipients of Rave notifications.

Millennium Ultra also supports the Rave Alert automated “set it and forget it” data management with on-going proactive updates.
